|------------|--------------|---------------|
| • React.js | • Typescript | • Java Script |
| • Next.js | • Node | • MySQL |
| • Python | • Tailwind | • HTML |

PROJECTS

Farm Website

I built a full stack app for a client to display a list of products and allow users to add products to their cart. I utilized Next.js and React for the front-end user interface, while MySQL was deployed as the relational database to manage users carts. Deployment was accomplished using Docker on a web hosting service.

Portfolio Website

I created a front-end web application to exhibit my projects and professional experience. Employing Next.js and React with TypeScript, I seamlessly integrated data from GitHub's RESTful API to dynamically showcase project activity.

Custom QR Code Generator

Using my extensive knowledge of HTML, CSS, and JavaScript, I crafted a QR code generator with superb user experience and ease of use.
